

Test Results — ARMP-2026.07.21-PILOT-AUTH-R3

Run 2026-07-22. JS suites via `npm test` against `deploy/app.html` ; backend proofs against real PostgreSQL 16.

JavaScript battery (all green)

Suite	Result
1 — \$232,050 real-data E2E	26/26
2 — Review controls	24/24
3 — Import Template & validation	23/23
4 — Multi-file regression & smoke	15/15
5 — TK-Fujikin \$2,305,295 template E2E	34/34
6 — OCR-degraded RMA	9/9
7 — Go-live guardrails	30/30
8 — Support bot	24/24
Video player	27/27
9 — Prohibited-pattern gate (R3, expanded)	1101/1101
Staging smoke (deployable artifact)	8/8
10 — Frontend security (R3)	176/176
11 — Data boundary (network-instrumented)	8/8
12 — R2 localStorage cannot grant R3 access	18/18

R2’s original 503 assertions are retained and unweakened (suites 1–9 + smoke + gate).

Backend proofs (real PostgreSQL 16, local)

- 12 migrations apply cleanly.
- RLS suite: **26/26** (org isolation read+write, anonymous denial on all protected tables, customer cannot change pilot dates/status or assign internal roles, internal_notes column blocked, AAL1 denied / AAL2 authorized, ops admin cross-org read).
- 20 Edge Functions: `deno check` 20/20.

NOT RUN / NOT VALIDATED IN STAGING

Everything requiring the live Supabase staging project or Netlify staging site: migrations applied to staging, Edge Function runtime behavior, MFA enrollment/challenge, invitation email + links, session-revocation propagation timing, staging data-boundary capture, and the 16-step staging E2E. These are reported NOT RUN until executed via the CI workflows.
