15. Troubleshooting & Support

1. Overview & Key Concepts

AR Match Pro is an enterprise-grade Accounts Receivable cash application platform. It automates matching incoming payments to open invoices, reducing manual effort, improving accuracy, and providing real-time visibility into your AR position.

Key Metrics

Term	Definition
Auto-Match Rate (STP)	Percentage of payments matched automatically without human intervention. A rate above 80% is considered good.
DSO — Days Sales Outstanding	Average days to collect payment after a sale. Formula: $(\text{Open Balance} \div \text{Matched Revenue}) \times 30$. Lower is better.
Unapplied Cash	Payments received but not yet matched to an invoice. Sit in a pending state until resolved.
Short Pay	Payment is less than the invoice amount. The difference (variance) requires resolution.
Overpay	Payment exceeds the invoice amount. The excess must be returned or credited.
Exception	Any payment that could not be automatically matched and requires manual review.
Reconcile	Verifying that payments and invoices balance, including any write-offs or bank fees.
Posting Export	Final file exported to your ERP system (SAP, NetSuite, Dynamics) to post cash entries.

Workflow Overview

AR Match Pro follows a linear, auditable workflow:

Import Invoices → Import Remittance → Run Auto-Matching → Review Exceptions → Approve → Export to ERP

Each step is tracked and all actions are reversible until the posting export is locked.

2. Getting Started

Logging In

Navigate to your AR Match Pro URL and enter your credentials. New users can register from the login screen. If you have a license key, enter it during registration to activate your plan.

Demo Mode

Click **Try Demo** on the login screen to explore the application with pre-loaded sample data. In demo mode data is not saved between sessions and export features require Starter plan or above.

Loading Sample Data

Go to **Invoices** and click **Load sample** to populate 17 sample invoices. Go to **Remittance** and click **Load JPM** or **Load BOA** to load payments for each bank. Sample data includes Pinnacle Systems (\$39,700) to demonstrate multi-invoice PO group matching.

■ Tip: Load both JPM and BOA sample data, then run Auto-Match to see a full matching cycle including exact matches, short pays, and PO group matches.

Navigation

Section	Purpose
Today's Work	Worklist dashboard showing urgent exceptions and pending tasks
Cash Application	Main workspace: match payments to invoices, review, reconcile, export
Invoices	View, edit, import, and manage all open invoices
Remittance	View, edit, import, and manage all incoming payments
CFO Summary	Executive dashboard: period metrics, DSO, ROI, and alerts
Posting Export	Final review and download of ERP posting file
Reports	Match rate, exception breakdown, DSO trend, and export
Settings	Account, matching rules, CFO thresholds, and plan management

3. Dashboard & KPI Cards

The KPI strip at the top of the screen displays real-time metrics. Each card is clickable and navigates directly to the relevant section.

Card	Color	Click Action
Cash Matched	Green	Navigate to Reconcile tab
Match Rate	Blue	Navigate to Reports panel
Unapplied Cash	Gold	Navigate to To Be Matched tab
Exceptions	Red	Navigate to Exceptions tab (all types shown)
Short Pays	Orange	Navigate to Exceptions filtered to Short Pay only
Invoices	Neutral	Navigate to Invoices panel (all filters cleared)
Payments	Neutral	Navigate to To Be Matched tab

KPI values update automatically after: importing data, running matching, approving allocations, or resolving exceptions.

4. Importing Data

AR Match Pro accepts invoice and remittance data in multiple formats. The import engine auto-detects column names and maps them intelligently.

Supported Formats

Format	Invoice Import	Remittance Import
CSV (comma-separated)	✓	✓
Excel (.xlsx)	✓	✓
Tab-delimited (.txt/.tsv)	✓	✓
BAI2 (bank format)	—	✓
CAMT.053 (SWIFT)	—	✓
OFX / QFX	—	✓
MT940	—	✓

Required Invoice Columns

Column names are flexible — the system recognizes common variations (e.g., “InvoiceNum”, “Inv #”, “Invoice Number” all map to Invoice #).

Column	Required	Description
Customer Name	Yes	Customer or company name
Account #	Recommended	Customer account number (e.g., 40017108). Must match remittance.
Invoice #	Yes	Unique invoice identifier
Amount / Open Balance	Yes	Invoice amount (numeric; may include \$ and commas)
PO Number	Optional	Purchase order reference — used for PO-group matching
Sales Order	Optional	Sales order reference for SO-based matching
Due Date	Recommended	Used for aging calculation and DSO
Invoice Date	Optional	Date invoice was issued
Document #	Optional	Internal document reference (SAP: BELNR)

■■ Account numbers must match exactly between invoices and remittance for automatic matching. Ensure your data sources use consistent account numbering.

5. Cash Application Workflow

The Cash Application section is the core workspace. It has four tabs: To Be Matched, Review, Exceptions, and Reconcile.

To Be Matched Tab

This is where you allocate payments to invoices. The workspace is split into two panels separated by a draggable divider:

Payment Queue (top panel)

Lists all imported payments. Each card shows customer name, amount, payment method, bank tag, and status (Pending / Matched / Exception). Use the bank account filter at the top to show only JPM or BOA payments. Click a payment to load it into the allocation workspace.

Customer Open Items (bottom panel)

Displays open invoices for the selected payment's account. When a payment is selected, invoices are automatically sorted by relevance — highest-confidence matches appear first. All columns support sorting (click header) and per-column filtering (type in the filter row below headers). Drag the divider to show more or fewer invoice rows.

Auto-Matching Engine

Click  **Auto-match all** to run the matching engine across all payments simultaneously. The engine attempts matches in this priority order:

Priority	Match Type	Description
1	Direct Invoice #	Payment references an exact invoice number
2	PO Group Match	Sum of all open invoices on the same PO equals the payment amount
3	PO Subset Match	A subset of invoices on the same PO equals the payment amount
4	Sales Order Match	Match by Sales Order reference number
5	Amount Match	Same customer account with a matching dollar amount
6	Exception	No match found — flagged for manual review

Multi-Invoice PO Matching Example — Pinnacle Systems

Payment from Pinnacle Systems for \$39,700 references PO 4522100001. The engine finds invoice 5105001001 (\$28,500) and invoice 5105001002 (\$11,200) — both on the same PO. Combined total: \$39,700. The system auto-matches the payment to both invoices simultaneously and marks the result as Exact.

 Load the Pinnacle sample data and run Auto-Match to see this multi-invoice PO group match in action.

Manual Allocation

Select a payment from the queue, then check invoice rows in Customer Open Items to manually allocate amounts. The running total shows applied vs remaining. Click  **Approve** when the allocation ties to zero. Approved allocations move immediately to the Review tab.

6. Exception Management

Exceptions are payments that could not be automatically matched. They appear in the Exceptions tab and on the Today's Work dashboard.

Exception Types

Type	Description	Suggested Action
Short Pay	Payment is less than the invoice amount	Write off the difference or chase the balance from the customer
Overpay	Payment exceeds the invoice amount	Return the excess or apply a credit memo
Unmatched	No invoice or PO reference found	Contact customer to identify the payment purpose
Missing PO	PO number required but not provided	Request PO number from the customer or sales team
Duplicate	Possible duplicate payment detected by the system	Verify with bank; reject if confirmed duplicate
Unapplied	Payment received with no allocation instructions	Apply to oldest open invoice or hold as unapplied cash
Bank Fee	Bank deducted fees from the payment amount	Book the fee amount to the bank fee GL account

Resolution Flows

Apply to Invoice — Selecting this resolution navigates to Customer Open Items, pre-filtered to the exception's account. Click any invoice row to see a confirmation dialog showing payment amount, invoice amount, and variance. Confirm to resolve and move to Review.

Post as Unapplied Cash — Opens an account search popup. Type part of an account number or customer name; matching accounts appear instantly. Click any result to post the payment as unapplied cash — the popup closes automatically.

Write Off — Marks the variance as a write-off. The amount appears in the Write-off column in Reconcile for separate GL posting.

Bank Fee — Marks the variance as a bank-originated fee. Appears in the Bank Fee column in Reconcile.

Chase Customer — Holds the exception for follow-up. Remains Open on Today's Work until resolved.

Duplicate — Reject — Marks payment as a duplicate. No posting entry is created.

■■ Resolved exceptions can be reverted to Open status using the Revert button on the resolved exception card.

7. Review Tab

The Review tab shows all matched records awaiting final export. Records arrive from two sources: auto-matching results and manually approved allocations.

Actions

Action	Description
Export Posting File	Downloads the posting file (CSV, Excel, or PDF) for ERP import
Clear All	Removes all match results (does not clear invoices or payments)
Remove Row	Removes a single match result after confirmation

Always review before exporting. Verify all amounts are correct and variances are expected. Once posted to your ERP, reversals must be done in the ERP system.

8. Reconcile Tab

The Reconcile tab provides a line-by-line view of matched payments vs invoices, with editable Write-off and Bank Fee fields.

Column Reference

Column	Description
Customer	Customer name from the matched invoice
Invoice #	Invoice number
PO #	Purchase order number (if available)
Payment	Original invoice amount
Applied	Amount actually applied to the invoice
Write-off	Editable — enter any amount being written off (short pay remainder, disputed amounts)
Bank Fee	Editable — enter any bank-originated fee that was deducted from the payment
Variance	Net of (Applied – Original) minus Write-off minus Bank Fee. “Ties” = zero balance.
Status	Reconciled (zero variance) or Open (variance remaining)

Write-off and Bank Fee fields are editable only for rows with an outstanding variance. Exactly matched rows show read-only dashes.

■ Enter write-off amounts to close small variances within your company's tolerance policy. This keeps Variance at “Ties” for clean ERP posting.

9. Invoices & Remittance Panels

These panels provide a spreadsheet-like view of all imported data with inline editing, multi-column sorting and filtering, and export.

Sorting

Click any column header to sort ascending. Click again to sort descending. A sort indicator arrow shows the active column.

Filtering

Type in the filter input row (the grey row directly below the column headers) to filter that column. Filters apply in real-time. Multiple columns can be filtered simultaneously. Click **Clear filters** to reset.

Inline Editing

Click any cell in the Invoices table to edit it directly. Changes save immediately and are reflected in the next matching run. Use this to correct import errors or update open amounts.

Remittance Load Options

Option	Description
Load JPM	Loads JP Morgan sample payments: Delta Aerospace, Orion Logistics, Vertex Energy, Unknown Payer (9 payments)
Load BOA	Loads Bank of America sample payments: MedCore Solutions, Pinnacle Systems (4 payments)
Import File	Upload CSV, Excel, BAI2, CAMT.053, OFX, or MT940 file from your bank
Add Row	Manually add a single remittance entry

Bank Account Filter

The Bank Account dropdown at the top of Cash Application filters the payment queue and remittance table to a single bank. Select **All bank accounts** to view all payments.

10. Posting Export

The Posting Export panel shows all approved records ready for ERP import. This is the final step before data enters your accounting system.

Export Columns

Column	SAP Field	Description
Account	KUNNR	Customer account number
Customer	NAME1	Customer name
Payment Date	BUDAT	Posting date (date of export)
Invoice #	BELNR	Invoice document number
PO #	EBELN	Purchase order number
Sales Order	VBELN	Sales order number
Type	BLART	Document type: Invoice / Adjustment / Payment
Document #	AUGBL	Clearing document number
Post Amount	WRBTR	Amount being posted
Write-off	WMWST	Write-off amount (if applicable; blank = none)
Bank Fee	ZTERM	Bank fee amount (if applicable; blank = none)

Download Formats

Format	File Type	Best For
CSV	.csv	Universal ERP import; most accounting systems accept this format
Excel	.xls	Manual review, pivot tables, or Excel-based approval workflows
PDF	Print dialog	Approval documentation, archiving, and audit trail records

11. Reports

The Reports section provides operational metrics for AR managers and controllers.

Available Metrics

Metric	Description
Cash Matched	Total dollar amount matched in this session
Auto-Match Rate	Percentage of payments matched automatically (straight-through processing rate)
Unapplied Cash	Total dollar amount of unresolved payments pending decision
Short Pays	Count and total dollar amount of underpayments
DSO	Days Sales Outstanding: $(\text{Open Invoice Balance} \div \text{Matched Revenue}) \times 30$
Exception Aging	Count of exceptions still in Open status
Top Issue Type	Most common exception category in the current dataset

Exporting Reports

CSV — Structured file with summary metrics, match results, and exception breakdown. Compatible with Excel, Google Sheets, and data warehouses.

Excel — Tab-delimited .xls with UTF-8 BOM encoding for proper Excel import. All data in spreadsheet format.

PDF — Opens a print-optimized window. Use your browser's Print → Save as PDF to create an archivable document.

12. CFO Summary

The CFO Summary provides an executive-level view of AR performance across monthly, quarterly, and year-to-date periods.

Period Snapshots

Metrics accumulate automatically using localStorage snapshots. Every time matching runs, the system records peak metrics for the current month, quarter, and YTD. Snapshots persist even after invoice data is cleared, building a historical record over time.

Use the Month / Quarter / YTD toggle at the top of CFO Summary to switch views.

KPI Reference

KPI	Formula / Source	Alert Threshold
Cash Matched	Sum of all exactly matched payments	None
Auto-Match Rate	Matched \$ ÷ Total Payments \$	Below target % (configurable)
DSO	(Open Invoice Balance ÷ Matched Revenue) × 30	Above threshold days (configurable)
Exception Rate	Open Exceptions ÷ Total Payments	Above threshold % (configurable)
Short Pay Exposure	Sum of all short pay variance amounts	None
ROI Multiple	Labor saved ÷ Monthly subscription cost	None
Hours Saved	Auto-matched count × 8 min ÷ 60	None
Labor Savings \$	Hours Saved × AR hourly rate (configurable)	None

Threshold alerts appear as colored banners when KPIs breach configured limits. Set thresholds in Settings → CFO Settings.

13. Settings

Account Settings

Setting	Description
First / Last Name	Your display name shown in the top navigation bar
Email	Your login email address
Role	Your AR role: Specialist / Manager / Controller / CFO / Admin
Dark / Light Theme	Toggle between dark and light color schemes using the moon/sun icon

Matching Engine Settings

Setting	Description
Match Priority Order	Drag rules to reorder matching priority (Invoice #, PO, SO, Amount)
Tolerance (\$)	Dollar amount within which a match is considered exact (default: \$1.00)
Invoice # Matching	Enable or disable direct invoice number matching pass
PO Matching	Enable or disable purchase order matching pass
SO Matching	Enable or disable sales order matching pass

CFO Settings

Setting	Default	Description
Target Auto-Match Rate	80%	Alert fires when STP rate falls below this threshold
AR Labor Rate	\$65/hr	Fully-loaded hourly rate used in ROI labor savings calculation
Subscription Cost	\$999/mo	Monthly cost used for ROI multiple calculation
Fiscal Year Start	January	First month of your fiscal year for YTD calculations
DSO Alert Threshold	45 days	Alert fires when DSO exceeds this number of days
Exception Rate Alert	10%	Alert fires when exception rate exceeds this percentage

Change Plan

Click **Change Plan** to view all available plans. Upgrade plans activate immediately (in demo: simulated). Downgrade takes effect at the end of the billing period.

Plan	Price	Key Features
Demo	Free	Sample data only · No export · Explore all features

Plan	Price	Key Features
Starter	\$299/mo	Up to 1,000 invoices/mo · CSV export · Email support
Pro	\$599/mo	Unlimited invoices · All export formats · CFO dashboard · Priority support
Team	\$999/mo	All Pro features · Multi-user · Audit trail · ERP posting · SLA guarantee

14. Keyboard Shortcuts & Tips

Keyboard Shortcuts

Shortcut / Action	Result
Enter in search bar	Execute global search across all invoice columns
Escape key	Close any open modal, dropdown, or autocomplete
Click column header	Sort table by that column; click again to reverse order
Type in filter row	Filter that column in real-time; multiple columns can be active
Drag the divider handle	Resize the split between Payment Queue and Customer Open Items
Click KPI card	Navigate directly to the relevant section or tab

Power User Tips

Bank-specific workflows: Filter by bank account before running matching to process one bank at a time. Useful when different team members handle different banks.

Multi-account allocation: A single payment can be split across multiple customer accounts. Select the payment, change the Account filter in Customer Open Items to a different account, select invoices, and apply. Repeat for each account.

Bulk exception resolution: Click the Exceptions KPI card to jump directly to exceptions with all types visible. Use the type filter to focus on one category at a time.

Reconcile before export: Always review the Reconcile tab before downloading the posting file. Enter write-offs and bank fees to ensure the Variance column shows “Ties” for all rows.

CFO snapshots are automatic: Period metrics accumulate every time you run matching. No manual action required — the system records peak metrics in the background.

AI support chat: Click the  **Contact** button in Settings or the ? help button in the top navigation to open the AI support assistant. Describe your issue and receive immediate guidance or file a support ticket.
